

WHAT IS CLAIMED IS:

1. A fluororesin powder coating composition characterized by comprising a non-vinylidene fluororesin having a Tg higher than 40°C and a resin having a Tg of  
5 from 0 to 40°C.
2. The fluororesin powder coating composition according to Claim 1, wherein the blend ratio (mass ratio) of the non-vinylidene fluororesin having a Tg higher than 40°C/the resin having a Tg of from 0 to 40°C, is from  
10 95/5 to 30/70.
3. The fluororesin powder coating composition according to Claim 1, characterized in that the non-vinylidene fluororesin has crosslinkable reactive groups, and the fluororesin powder coating composition contains a curing  
15 agent capable of reacting with the crosslinkable reactive groups to form crosslinkages.
4. The fluororesin powder coating composition according to Claim 3, wherein the crosslinkable reactive groups are hydroxyl groups, carboxyl groups, amide groups, amino  
20 groups, mercapto groups, glycidyl groups, halogen atoms, isocyanate groups or hydrolysable silyl groups.
5. The fluororesin powder coating composition according to Claim 1, wherein the resin having a Tg of from 0 to 40°C is an acrylic resin, a polyester resin or a non-  
25 vinylidene fluororesin.
6. The fluororesin powder coating composition according to Claim 1, wherein the non-vinylidene fluororesin having

a Tg of from 0 to 40°C is curable with a curing agent which is capable of curing the non-vinylidene fluororesin having a Tg higher than 40°C.

7. The fluororesin powder coating composition according to Claim 1, wherein the non-vinylidene fluororesin comprises fluoroolefin units and monomer units copolymerizable with the fluoroolefin units.
